Github Copilot Harness

How the Harness Works

The harness sits between what you configure and the model that reasons over it.

Copilot Studio Harness Comparison

Category	GITHUB COPILOT HARNESS	STANDARD HARNESS	COPILOT CHAT HARNESS
Best for	Complex, multi-step business processes	Rule-based agents and structured, repeatable conversations	Extending Microsoft 365 Copilot Chat with your own knowledge
How it works	Takes a goal, breaks it into steps, adapts as it goes	Follows the topics and rules you define	Connects your knowledge into Microsoft 365 Copilot
Recovers from problems	Retries and finds another path automatically	Follows the paths you built	Not a focus
Works with files	Natively creates & edits Word, Excel, PowerPoint, PDF	Not a focus	Not a focus
Skills & memory	Yes	Not a focus	Not a focus
Who you can publish to	Internal teams **or external customers**	Internal teams **or external customers**	**Internal teams only**
A real example	Accounts payable — reads invoices, matches them to purchase orders, routes exceptions for approval	Internal help desk — answers common questions and routes simple requests through a workflow	Employee onboarding — answers questions from your SharePoint knowledge
Billing	**Copilot Credits (usage-based)**	Standard licensing + Copilot Credits	Consumption, or included in the Microsoft 365 Copilot licence
